

PROOFLINE

Tablekeeper

Keep the promise,
even when the
floor changes.

A reusable agent factory.
A restaurant reservation service.

Shivam Gupta · Dark Factory 2026

A booking is a promise to a guest

7:00 PM

One table becomes unusable.
The guests are already on their way.

The host needs a safe answer

Who needs to move?
Can everyone keep their time?
Will their agreed terms survive?

Illustrative service disruption. Frequency and willingness to pay still need customer research.

One dispatch. Four distinct seats.

Challenge and reject

Actual BAND Desktop room during stage 4 review, 27 Sep 2026 at 17:49 UTC.

Four accepted stages

01	Reservations	120 / 120
02	Online booking	145 / 145
03	Policies and recurring visits	152 / 152
04	Closure recovery	158 / 158

Published checks passed in both isolated and fresh-clone isolated runs.

Each stage includes inherited suites. These counts are not distinct requirements.

PROOFLINE / TABLEKEEPER

Independent review caught a hidden failure

The published checks passed. A corrupted restore still erased a permanent exception on a manually changed recurring visit.

Rejected

Verifier added a regression and held the release.

Repaired

Engineer checked exception flags against amendment history.

Rechecked

Independent checks passed, including the original corruption regression.

Stage 3 accepted at 8a12344. The failed review and original fix remain inspectable.

A small restaurant business to validate

\$79

per location per month
Proposed price. No sales yet.

Direct reservations and recovery tools

Start with intimate four-to-six-table venues that attract their own guests.

Test with five design partners before promising a managed live service.

Illustrative contribution: \$29.80/month before acquisition and overhead.
At one support hour per venue, it falls to \$9.80. Support is the key risk.

Reproducible, with clear limits

Fresh clone. No outbound runtime.

2 vCPU and 2 GiB service limits
69 / 69 independent HTTP checks
24 generated planner fixtures
6h 24m to final report, including recovery

BEFORE LIVE USE

Durable state
Disable test controls
Operational validation

Operator restarted the same BAND seats in the same room, with new provider sessions.
No new task or implementation hints. Provider-billed spend is unavailable.
